2.5.1. Mechanism of internal / external assessment is transparent and the grievance redressal system is time bound and efficient

Internal assessment of student is a continuous process for every semester. The students are assessed through internal exams, quizzes, assignments, class test, projects, case studies etc. Class test is usually taken in every week. The results of the class test are shown to the students and they are informed the scope of improvement. This ensures that the student answers the question in proper manner in the case of same question arises in the internal/university examination. The transparency in the examination process is followed as per the guidelines of the Jawaharlal Nehru Technological University. The same guidelines are also applied to internal assessment examination wherever applicable. After the completion of internal exam, papers are evaluated and discussed with students. Any change of marks or entry of total marks are rectified by the subject teacher. The staff discuss the evaluated paper with the students individually, giving attention to the area of improvement. The mark list of the subject is displayed on the notice board only after each student has checked his/her marks and are satisfied with it. In case of any discrepancy, the paper is re-evaluated by other staff in order to provide fair evaluation. Students have easy access to staff regarding correction of marks at college level. Prior to submitting the answer papers to the examination department, each staff ensures that any evaluation related conflict is resolved. An active grievance redressal committee ensures that the exam related grievances are resolved in a time bound efficient manner. Students are encouraged to voice their grievances without any fear of being

judged/targeted by teachers/peers. Both direct/indirect mode of grievance reporting are considered for fair evaluation process.

Any grievances of the students related to university examinations such as online form submission, queries related to hall ticket viz. correction in name/ subject/ subject code/ programme/ pattern, wrong entry of marks and absentee etc. are addressed at college and university level in time-bound manner under the guidance of examination department of college. The office and examination department guide students to apply grievances through online portal of Jawaharlal Nehru Technological University.

After completion of Semester exam, University usually declares the result within 40 to 45 days. Students can apply online for revaluation within 10 days after the declaration of the result. The result of revaluation is declared within 45 days. If there is any change of marks, university makes the changes and if there is no change the earlier marks are retained.

Marks: 10

Choose the correct answer.

H.T. No.

209VIR0001

- Which of the following species is used for producing erythromycin?
a) *Penicillium notatum* b) *Streptomyces erythraeus*
c) *Streptomyces griseus* d) *Streptomyces rimosus* [c]
- _____ is an example of penicillinase resistant parenteral, acid unstable penicillin?
a) Ampicillin b) Methicillin c) Oxacillin d) Cloxacillin [a]
- _____ is not an example of β -lactamase inhibitor?
a) Clavulanic acid b) Tazobactam c) Sulbactam d) Amoxicillin [d]
- Tetracyclines inhibit protein synthesis in bacteria by binding to their _____ ribosomal subunit?
a) 50s b) 70s c) 30s d) 40s [c]
- Penicillins upon degradation in presence of acids gives _____.
a) Penillic acid b) Penilloic acid c) Penaldic acid d) Penicillamine [b]
- Which drug comes under macrolide antibiotic?
a) Azithromycin b) Erythromycin
c) Clarithromycin d) All of the above [d]
- In tetracyclines, the phenolic hydroxyl group shows a pKa value in the range _____.
a) 2-3 b) 5-6 c) 6-7 d) 9-10 [c]
- Which of the following is an example of 8-amino quinolines?
a) Pamaquine b) Amodiaquin c) Artesunate d) Chloroquine [a]
- Benorylate is an example of _____ prodrug?
a) Bipartite prodrug b) Mutual prodrug
c) Tripartite prodrug d) Bioprecursor prodrug [c]
- Pseudomembraneous colitis is the major side effect of _____ antibiotic?
a) Chloramphenicol b) Clindamycin
c) Aminoglycosides d) Macrolides [d]

OPEN BOOK TEST

Cardiac glycosides :-

The cardiac glycosides are an important class of naturally occurring drugs, the actions of which include both beneficial and toxic effects on the heart. Their desirable cardiotoxic action is of particular benefit in the treatment of congestive heart failure and associated edema, and their preparations have been used as medicinal agents as well as poisons since 1500 BC. The therapeutic use of purified cardiac glycoside preparations have occurred only over the last century. Today, the cardiac glycosides represent one of the most important drug classes available to physician for the treatment of congestive heart failure (CHF).

Chemistry of cardiac glycosides :-

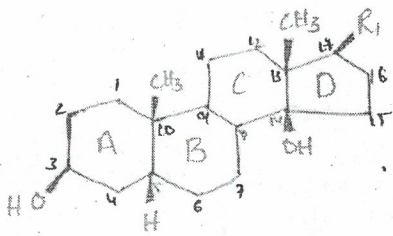

Cardiac glycosides and other similar glycosides are composed of two portions, the sugar moiety and the non-sugar moiety.

Aglycone:

The aglycone portion of the cardiac glycosides is a steroid nucleus with a unique set of fused rings, which make these agents easily distinguished from the other steroids. Ring A-B and C-D are cis fused, where as ring B have a trans configuration. The steroid nucleus also carries, in most cases, two angular methyl groups at C-10 and C-13. The lactone ring at C-17 is another major structural feature of the cardiac aglycones. In most cases, the cardiac glycosides of plant origin the cardenolides possess as 5-membered α, β -saturated lactone ring, where as those derived from animal origin the bufadienolides possess a 6-membered lactone ring with two conjugated double bonds.

Pharmaceutical Sciences
Seshadri Rao Knowledge Village
GUDLAVALLURU - 521 356

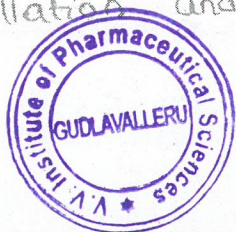

Selected sugars found in naturally occurring cardiac glycosides.

Mechanism of action of cardiac glycosides:-

- cardiac glycosides shows its action either by direct (or) indirect mechanism.
- In normal resting state there is more amount of sodium present outside the myocardium.
- During depolarisation due to influx of Na^+ ions, the elevated action potential was observed.
- The influxed Na^+ ions further activates Ca^{2+} ion channels and increase the influx of Ca^{2+} moderately (plateau in graph was observed) which leads to myocardial contraction.
- further potassium ions effluxed out to restore normal action potential.
- The exchange of Na^+ and K^+ ions occurs through Na^+/K^+ ATPase pump and it is energy dependent.
- cardiac glycosides like Digitalis inhibit Na^+/K^+ ATPase enzyme further prevent exchange of Na^+ ions with K^+ ions which in turn results in accumulation of Ca^{2+} ions.
- elevated intracellular Ca^{2+} triggers a series of intracellular biochemical changes that ultimately results in myocardial contraction.

Therapeutic uses:-

→ Although the primary clinical use for digoxin is in the treatment of CHF, this agent also used in case of atrial flutter (or) fibrillation and paroxysmal atrial tachycardia.

Pharmaceutical Sciences
Seshadri Rao Knowledge Village
GUDLAVALLERU - 521 356

Anti-Hyperlipidemics

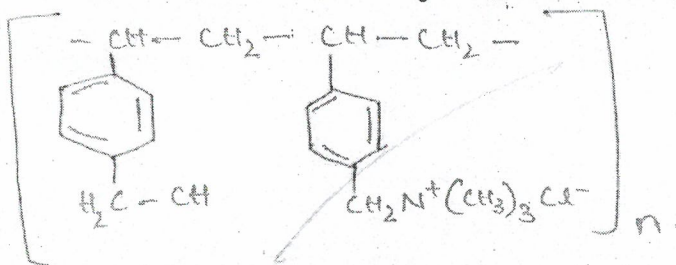

The agents (or) substances used to reduce the concentration of unwanted lipids in blood circulation are known as Anti-hyperlipidemic agents.

* The major action of the drugs is to decrease LDL levels, (or) increase VLDL (or) HDL levels.

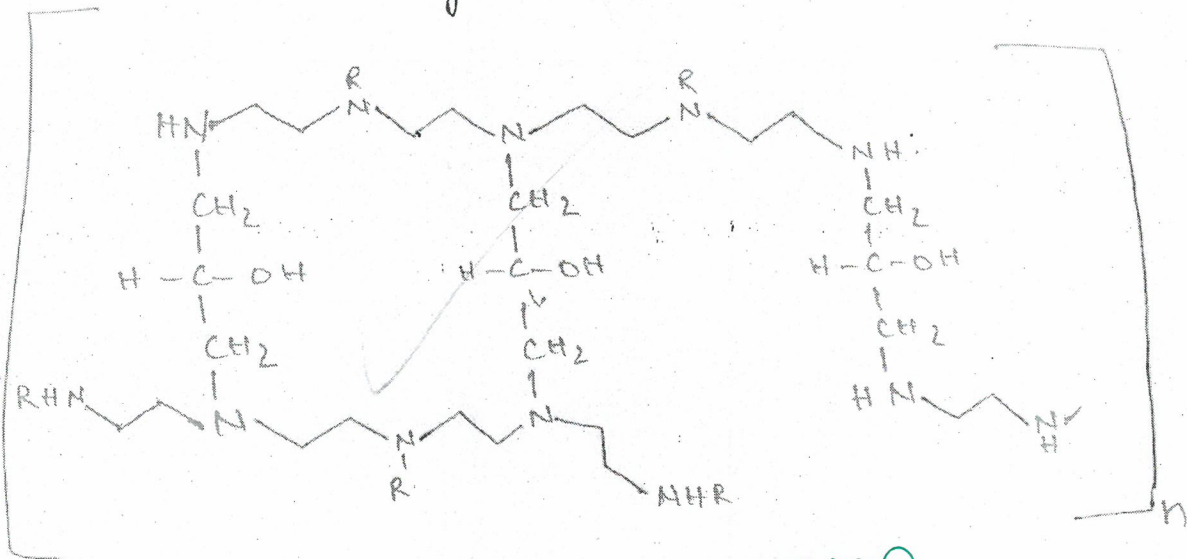

Classification of Hyperlipoproteinemias:-

These are classified into 4 types:-

1. Bile acid sequestering agents:-

cholestyramine.

colestipol.

ARAO

PRINCIPAL
V. V. Institute of
Pharmaceutical Sciences
Seshadri Rao Knowledge Village
GUDLAVALLERU - 521 356

Mechanism of action of sequestering agents:-

Bile acid sequestrants
(cholestyramine & colestipol)

Increase bile acid secretion.

Increase bile acid synthesis from cholesterol
(Activates 7 α -hydroxylase).

Decrease intrahepatic cholesterol pool.

Increase LDL receptor
expression.

Increase LDL utilization.

Decrease LDL levels.

Anti-hyperlipidemic action.

Increase HMGCo-A
reductase.

Increase VLDL

Anti-hyperlipidemic
action.

Uses:-

- used as Anti-hyperlipidemic agent
- used for the treatment of hypercholesterolemia.
- cholestyramine and colestipol are contraindicated in patients with primary biliary cirrhosis, because this can further raises serum cholesterol.

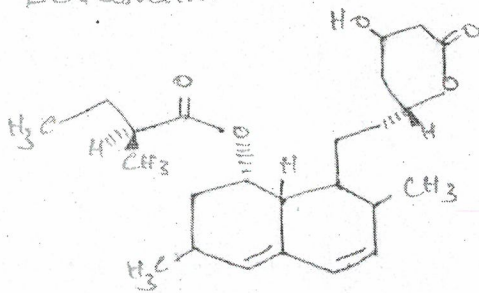

AR Rao

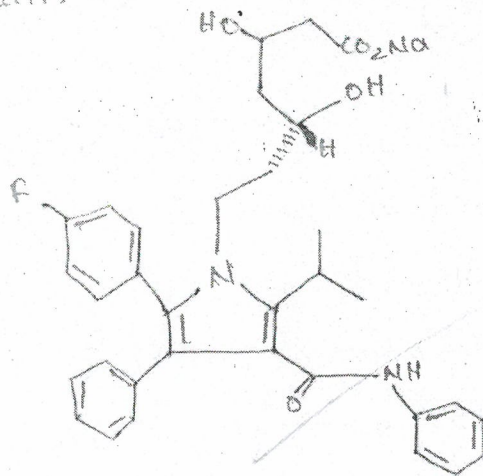

PRINCIPAL
V. V. Institute of
Pharmaceutical Sciences
Seshadri Rao Knowledge Village
GUDLAVALLERU - 521 356

2. HMG Co-A reductase inhibitors:-

Eg:- Lovastatin.

Atorvastatin

Mechanism of action:-

HMG Co-A reductase inhibitors inhibit the biosynthesis of cholesterol by inhibiting the HMG Co-A reductase enzyme. HMG Co-A reductase involved in conversion of HMG Co-A to mevalonic acid. HMG Co-A reductase inhibitors inhibit synthesis of mevalonate and inhibit cholesterol biosynthesis. Simultaneously increases the uptake of LDL and increases the expression of LDL receptors and decreases plasma concentration of LDL.

Uses:-

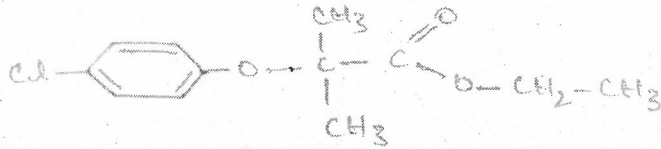

- used as anti-hyperlipidemic agent and to treat atherosclerosis.
- Atorvastatin, Lovastatin specifically indicate to reduce mortality in congestive heart failure (CHF).

V. V. Institute of
Pharmaceutical Sciences
Seshadri Rao Knowledge Village
GUDLAVALLERU - 521 356

3. Fibrates:

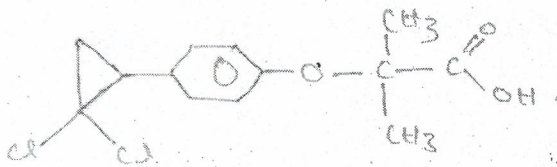

Eg:- clofibrate.

Fenofibrate.

Ciprofibrate.

Mechanism of Action :-

clofibrate (fibrates)

↓
Binds with PPAR α (Peroxisome proliferated activated receptor α)
in hepatocytes.

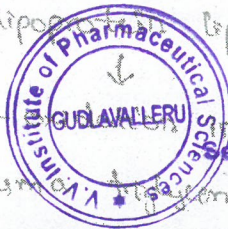

↓
1. Increase synthesis of apo A-I and apo A-II in liver cells.
↓
Increase plasma concentration of HDL.

2. Decrease synthesis of apo c-III in hepatocytes.

↓
Decrease lipoprotein lipase activity in muscle and vascular tissue.

↓
Increase β -oxidation in muscle and vascular tissue and

decrease plasma triglycerides.
GUDLAVALLERU - 521 356

Armed
PRINCIPAL
V. V. Institute of
Pharmaceutical Sciences
Seshadri Rao Knowledge Village
GUDLAVALLERU - 521 356

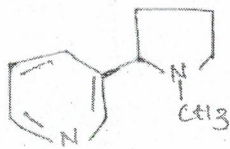

3. Increases β -oxidation in hepatocytes and decrease plasma triglycerides.

Uses:-

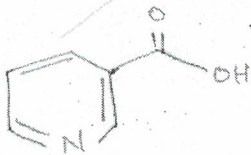

- used to treat hyper triglyceridemia.
- used in combination with HMG co-A reductase inhibitors and bile acid sequestering agents for treatment of cardiac diseases.

4. Nicotinic acid derivatives:-

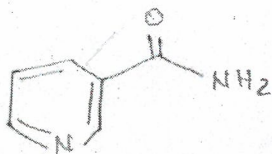

Eg:- Nicotine.

Nicotinic acid.

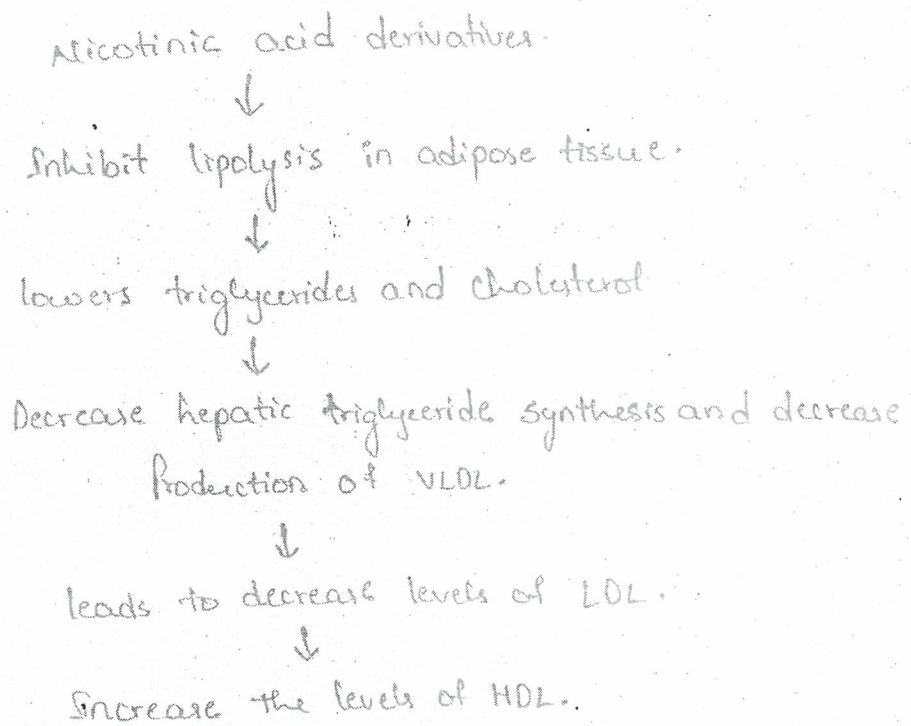

Nicotinamide

AW
PRINCIPAL
V. V. Institute of
Pharmaceutical Sciences
Seshadri Rao Knowledge Village
GUDLAVALLERU - 521 358

Mechanism of action:-

Uses:-

- used in treatment of hypercholesterolemia, hypertriglyceridemia, hyperlipidemia.
- It is also used as nutritional supplementation in prevention of Pellagra.

References:-

Foyes principles of medicinal chemistry 6th edition,
Pg. No: 798-817 & Pg. No: 698-704.

Assignment

Anti-hyperlipidemic agents

Definition:-

The agents (or) substances used to reduce the concentration of lipids in systemic circulation are known as Anti-hyperlipidemic agents.

Classification:-

Majorly classified as follows :-

1. Bile acid sequestering agents

Eg:- cholestyramine
colestipol.

2. HMG CO-A reductase inhibitors

Eg:- Lovastatin
Simvastatin
Atorvastatin
Fluvastatin.

10

3. Fibrates

Eg:- clofibrate
fenofibrate
Gemfibrate
Bezafibrate

4. Nicotinic acid derivative

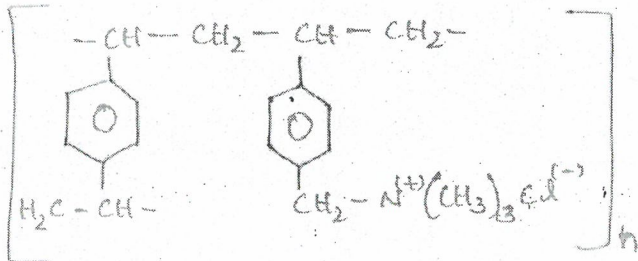

Eg:- Nicotine
Nicotinic acid
Nicotinamide.

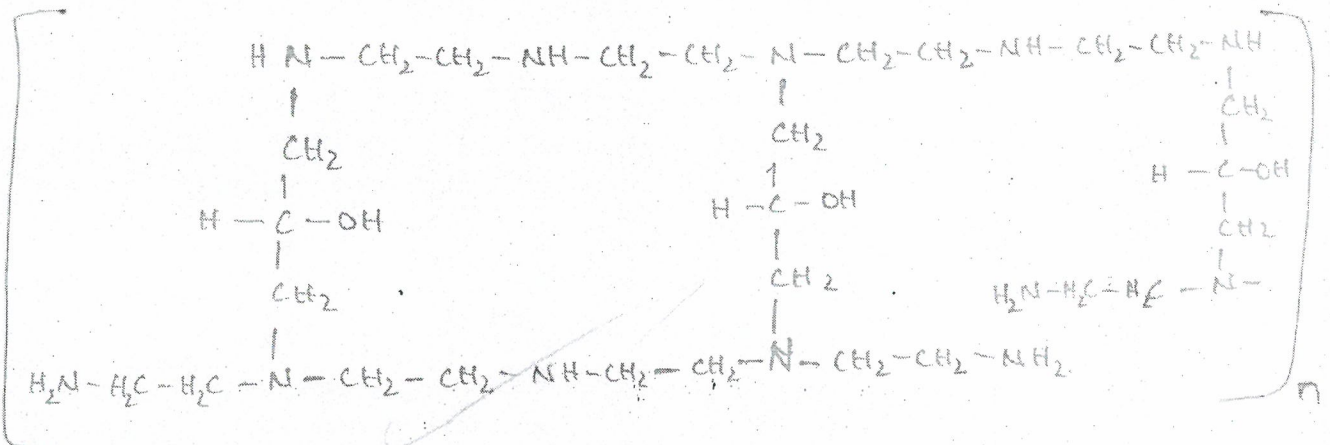

Alwar

u. Nicotinic acid derivatives:-

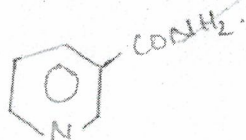

Eg:- a) Nicotine:-

b) Nicotinic acid:-

c) Nicotinamide:-

1. Bile acid sequestering agents:-

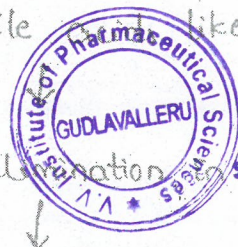

Mechanism of Action:-

Bile acid sequestering agents
(cholestyramine, colestipol)

↓
Increase excretion of bile acids

(By binding with bile acids like glycocholic acid & Taurocholic acid)

Promotes their elimination

Armao
PRINCIPAL
V. V. Institute of
Pharmaceutical Sciences
Seshadri Rao Knowledge Village
GUDLAVALLERU - 521 358

↓
Increase the synthesis of bile acids from cholesterol by activating 7- α hydroxylase enzyme.

↓
Decrease the amount of hepatic cholesterol

↓
Increase expression of LDL levels.

↓
Increase LDL utilization.

↓
Decrease plasma LDL levels.

↓
Increase expression of HMGCo-A reductase enzyme.

↓
Increase VLDL production & showⁿ anti-hyperlipidemic action.

* Bile acid sequestering agents always co-administrated with HMGCo-A reductase inhibitors.

Uses:-

- used as Anti-hyperlipidemic agent.
- used to treat hypercholesterolemia.
- cholestyramine used to treat prurities (itching) caused due to biliary obstruction.
- cholestipol used to control glycemic index in Type-2 diabetes.

Adverse effects :-

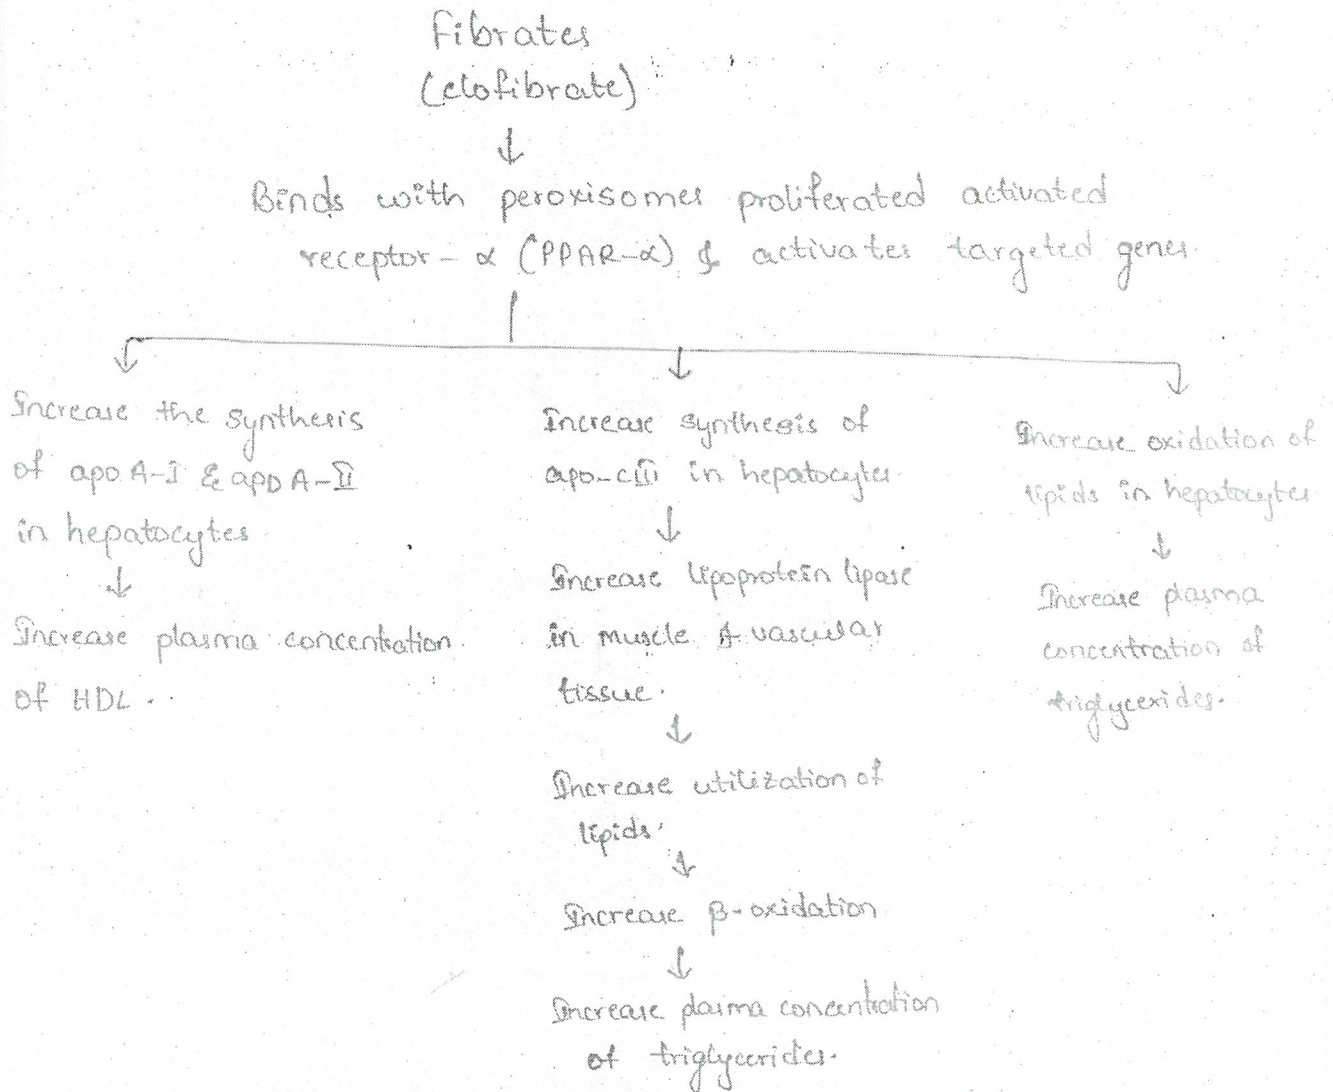

- Bloating
- Abdominal discomfort.
- Nausea
- vomiting
- itching
- Diarrhoea, etc...

Fibrates:-

Mechanism of action:-

Uses:-

- used as anti-hyperlipidemic agent.
- used to treat hypertriglyceridemia.
- used in combination with bile acid sequestering agents & HMGCo-A reductase inhibitors in cardiac disease.

Adverse effects:-

- shortness of breath.
- chest pain
- Blood in urination
- Decrease in urination
- fever, chills, muscle weakness.

Gudlavalleru,
date : 23/9/14.

From
Ch. Sri Sailaja
II year
Vallabhaneni Venkatadri
Institute of Pharmaceutical Sciences,
Gudlavalleru.

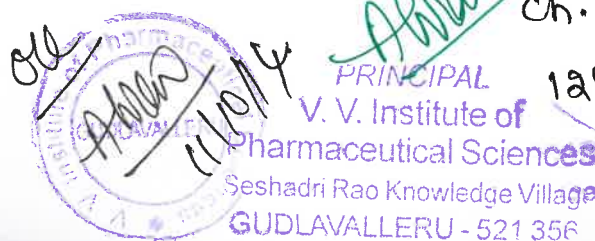

TO
The Principal
Vallabhaneni Venkatadri
Institute of Pharmaceutical Sciences,
Gudlavalleru.

Respected Sir,
Sub: Reconnection of name in original marks statements
ie; regular and supply.

I am Ch. Sri Sailaja studying II year attending
I-sem. bearing roll No: 129VIR0025. I have received
my I-II reg, I-II supply and I-II regular original
marks statement in which instead of CHAVA. SRI SAILAJA
it is written as CHAYA. SRI SAILAJA. So, I kindly
request you to correct my name according to
SSC marks statement.

Thanking you, Sir.

St. Am R.
23/9/14.

Your's obediently,
Ch. Sri Sailaja,
129VIR0025 (A-sec).
